

**Amendments to the Claims:**

Please cancel claims 1-24 and add new claims 25-43. This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1-24. (Canceled)

25. (New) A building skylight adapted to be attached to the roof of a building comprising:

a main body being arched in the shape of a parabola or a V and having an apex, a base, a first length at substantially the apex and a second length at the base, wherein the first length is less than the second length;

first and second end portions being disposed at first and second ends of the main body, respectively, each of the end portions having a top section and a bottom section, wherein the top sections define the first length and the bottom sections define the second length; and

a plurality of corrugations disposed on the main body.

26. (New) The building skylight of Claim 25, wherein the main body further has an attachment flange for securing the main body to the roof.

27. (New) The building skylight of Claim 25, wherein the corrugations are oriented perpendicularly to the longitudinal axis of the building skylight.

28. (New) The building skylight of Claim 25, wherein the corrugations are capable of transmitting sunlight having a low angle of incidence.

29. (New) The building skylight of Claim 25, wherein portions of the corrugations are oriented substantially perpendicularly to sunlight having a low angle of incidence.
30. (New) The building skylight of Claim 25, wherein the corrugations are angled to increase the angle of incidence of sunlight striking the corrugations.
31. (New) The building skylight of Claim 25, wherein the main body is arched along the longitudinal axis of the main body.
32. (New) The building skylight of Claim 25, wherein the base defines the width of the building skylight.
33. (New) The building skylight of Claim 25, wherein the base is in the form of a rectangle.
34. (New) The building skylight of Claim 25, wherein at least one of the main body, the first and second end portions, and the plurality of corrugations is made from a light-transmitting material.
35. (New) The building skylight of Claim 34, wherein the light-transmitting material is plastic.
36. (New) The building skylight of Claim 34, wherein the building skylight is formed using a press mold.
37. (New) The building skylight of Claim 34, wherein the light-transmitting material is prismatic.
38. (New) The building skylight of Claim 25, wherein at least one of the plurality of corrugations has a generally sinusoidal shape.

39. (New) The building skylight of Claim 25, wherein at least one of the end portions is planar.
40. (New) The building skylight of Claim 25, wherein at least one of the end portions has at least one corrugation.
41. (New) The building skylight of Claim 25, wherein at least one of the end portions is integral with the main body.
42. (New) The building skylight of Claim 25, wherein at least one section of at least one of the end portions slopes toward the midpoint of the main body.
43. (New) The building skylight of Claim 42, wherein at least one of the end portions slopes toward the midpoint at an angle of about 45 degrees relative to a base of the main body.
